PROFILE

Third-year honours-level Software Development student at Dundalk Institute of Technology (DkIT), seeking an Erasmus+ traineeship opportunity in software or games development. Strong foundation in object-oriented programming, full-stack development, UX design, computer security and software testing, with practical experience developing academic projects. Fluent in English and French, with a strong interest in building reliable, user-focused software and games.

TECHNICAL SKILLS

Programming: Java, C#, JavaScript, HTML, CSS, SQL, C++, Python

Databases: SQL, MS Access, MongoDB

Systems: Windows, Mac OS

Development: Full-stack development, Object-Oriented Programming, UX design, software testing, debugging, Git/GitHub

LANGUAGES

English — Fluent French — Fluent

EDUCATION

09/2023 – Present BSc (Hons) Software Development (QQI Level 8)
Dundalk Institute of Technology (DkIT)

Key Modules: UX Design, Full-Stack Development, Object-Oriented Programming, Computer Security, Software Testing, and other software development modules.

KEY PROJECTS

Book Collection Management — Object-Oriented Programming

- Developed a Java-based book collection management application using object-oriented programming principles, with a focus on structured design and maintainable code.
- Worked with classes, data persistence/database concepts and application functionality as part of an academic software project.

LEGO Website — Full-Stack Development

- Developed a full-stack web application, applying frontend and backend development concepts, database integration and web application design.
- Applied programming, debugging and testing skills to build and improve the application.

Horror Game Design — UX Design

- Designed a horror game concept with a focus on user experience, interaction and player-focused design.
- Applied UX principles to consider navigation, usability, atmosphere and the overall player experience.

RELEVANT EXPERIENCE

Relevant experience includes practical customer-facing and workplace experience developed alongside university studies, demonstrating reliability, communication, teamwork, time management, problem solving and the ability to work responsibly in a professional environment.

SKILLS PROFILE

Communication: Fluent in English and French, with experience communicating clearly with customers, colleagues and project teammates.

Problem Solving: Software development studies and projects have developed analytical thinking, debugging and structured problem-solving skills.

Teamwork: Experienced working with others through academic projects and professional environments, contributing to shared goals and completing assigned responsibilities.

Adaptability: Able to learn new technologies and apply programming concepts across different types of software projects, including web applications, object-oriented systems and game/UX design.

ADDITIONAL INFORMATION

GitHub portfolio: github.com/Brandvie

Interested in software development, games development, UX design and building practical software projects.
