GitHub: github.com/Brandvie

A student portfolio highlighting software development, full-stack web development, object-oriented programming and UX/game design projects relevant to Erasmus+ traineeship opportunities.

1. About Me

I am a full-time third-year honours-level Software Development student at Dundalk Institute of Technology (DkIT). My studies have given me practical experience across object-oriented programming, full-stack development, UX design, computer security and software testing. I enjoy developing practical software and exploring how technology and design can work together to create useful and engaging user experiences.

I am particularly interested in Erasmus+ traineeship opportunities where I can strengthen my professional software development skills, gain experience working in an international environment and contribute to real development projects. My portfolio demonstrates a mixture of programming, web development and creative UX/game design work.

Career Focus

- Software Development and application development
- Full-stack web development
- Object-oriented programming and backend development
- UX-focused software and game design
- Learning professional development workflows and testing practices

2. Technical Skills

Area	Skills
Programming	Java, C#, JavaScript, C++, Python
Web	HTML, CSS, JavaScript, full-stack web development
Databases	SQL, MongoDB, MS Access
Development	Object-Oriented Programming, debugging, software testing, application development
Tools / Version Control	Git and GitHub
UX / Creative	UX design, interaction design, game design concepts
Languages	English — Fluent; French — Fluent

3. Selected Projects

Project 1 — Book Collection Management

Focus: Object-Oriented Programming / Java

- Developed a book collection management application as an academic object-oriented programming project.
- Applied classes and object-oriented design to represent and manage application data.
- Worked with database and persistence concepts as part of a larger software application.
- Focused on structured, maintainable code and implementing required application functionality.
- This project demonstrates my interest in backend/application development and my ability to work with Java-based software systems.

Project 2 — LEGO Full-Stack Website

Focus: Full-Stack Web Development

- Developed a full-stack LEGO-themed website as part of my software development studies.
- Applied frontend and backend development concepts to create a functional web application.
- Worked with HTML, CSS, JavaScript and database-related concepts.
- Used debugging and testing approaches to identify and improve application issues.
- Demonstrates my suitability for software and full-stack development internships requiring web, API and database knowledge.

Project 3 — Horror Game Design

Focus: UX Design / Game Development

- Designed a horror game concept as part of my UX Design studies.
- Focused on the player's experience, interaction, navigation and usability.
- Considered how atmosphere, interaction and interface choices affect the overall player experience.
- Combines my technical software background with my interest in games and creative digital experiences.
- Demonstrates a strong match for game-development environments where programming and user experience are both important.

4. Erasmus+ Internship Fit

My portfolio has been prepared around three potential Erasmus+ traineeship directions: full-stack software development in Slovenia, game development in Greece, and software/hardware integration in Belgium. The projects below show where my current skills are strongest and where I would expect to develop further during a traineeship.

Candidate	Portfolio Match	Development Opportunity
Full-Stack Developer — Slovenia	LEGO full-stack website; JavaScript, HTML, CSS, SQL, databases, Git/GitHub and application development.	Develop professional experience with modern frameworks, APIs, backend technologies and production workflows.
Game Development Intern — Greece	Horror game design; UX principles; C++, C#, programming and software development foundation.	Develop stronger game-engine, gameplay programming, 3D and collaborative game-development skills.
Software Development & Hardware Integration — Belgium	C#, Java, software testing, debugging, databases and application development.	Gain professional experience in .NET/C#, hardware integration, QA/testing and real-world systems.

5. Project-to-Skill Evidence

- **Programming:** Java, C#, C++, Python and JavaScript are supported by my software development coursework and projects.
- **Web Development:** My LEGO full-stack website demonstrates practical web development experience.
- **Databases:** SQL and MongoDB/database concepts have been used across my software projects and coursework.
- **Object-Oriented Programming:** The Book Collection Management project demonstrates structured OOP development.
- **UX and Games:** My horror game design project demonstrates an interest in user-centred design and games development.
- **Testing and Debugging:** Software testing is a key part of my studies and I apply debugging/testing when developing projects.
- **Git/GitHub:** My GitHub portfolio provides a place to present and maintain software development work.
- **Communication:** Fluent English and French support communication in international and multicultural environments.

6. Strengths & Development Goals

Current strengths

- Broad programming foundation across Java, C#, C++, Python and JavaScript.
- Combination of technical software development and UX/game design.
- Academic experience with full-stack development, databases, OOP and testing.
- Ability to present practical projects as evidence of technical learning.
- Fluent English and French and experience working in professional environments.

Skills I want to strengthen during an internship

- Professional-scale software development and codebase practices.
- Modern web frameworks, REST APIs and backend technologies.
- Game engines and professional game-development workflows.
- Automated testing, QA and professional deployment practices.
- Working within an international development team using Agile/Scrum practices.
- Professional experience with technologies specified by each host company.

7. Portfolio & Contact

GitHub: github.com/Brandvie

Email: brandyviemyb66@gmail.com

Phone: +353 89 440 9730

The GitHub profile should contain the strongest available versions of my projects, with a README for each project explaining its purpose, technologies, main features, my contribution and how the project can be run. Screenshots or short demonstrations should be included where appropriate.

8. Portfolio Statement

I am looking for an Erasmus+ traineeship that will allow me to move from academic project work toward professional software development. I bring a broad programming foundation, practical project experience and a genuine interest in both technical development and user experience. I am particularly motivated to learn from an international development team, improve my professional coding practices and contribute positively while continuing to develop my skills.

Prepared for Erasmus+ traineeship applications — September 2026
